U. S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Dr. Luther L. Terry, Surgeon General of the Public Health Service, stated that the Special Advisory Committee on Oral Polio Vaccine has reiterated its recommendation that Type III oral polio vaccinations be continued for preschool and school-age children but not for adults at this time.

The recommendation was reached at a meeting of the Committee on September 15. The Committee, which met at the Service's National Institutes of Health, recommended that local communities proceed with planned mass vaccination campaigns using Types I and II of the oral vaccine for all members of the population and Type III for children.

In endorsing this recommendation Dr. Terry said: "The recommendation that Type III be confined to children has raised the question of spread from vaccinated children to adults, especially family members. The evidence does not indicate a hazard to adults exposed in this way."

A copy of the booklet "Immunization Information for International Travel," revised June, 1962, has been issued. Previous issues of the booklet and any addendums should be destroyed.

Changes in immunization requirements occurring before the next issue of the booklets will continue to be listed under the item "International Notes-Quarantine Measures" in the weekly Morbidity and Mortality Report, published by the Communicable Disease Center, Atlanta 22, Georgia. Persons not receiving this report may write to that office to be placed on the mailing list.

Additional copies of the booklet may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at 25 cents a copy. There is a discount of 25 per cent for 100 or more copies delivered to the same address.

The principal revisions are included in Section 5, which contains the most current information on the immunization requirements for entrance to countries; and new yellow fever vaccination centers to which the public may be referred have been added to Section 6.
